Built for Securities & Financial Services

Powered by Next.js · Vercel · Cloud Storage

What is CGSI E-Form?

CGSI E-Form is a digital form signing platform designed specifically for securities dealers and financial services professionals. It eliminates the need for physical paperwork by allowing dealers to upload pre-filled PDF forms, generate secure signing links for clients, and automatically overlay signatures onto the correct positions — all without installing any software.

Key Benefits

- No app installation — clients sign directly in their browser
- Professional PDF output with signatures perfectly placed
- Automatic email delivery of signed documents
- Multi-language support: English, Chinese, Malay
- Visual signature positioning — draw boxes on the PDF
- 7-day expiry links for security
- Works on desktop, tablet, and mobile

Supported Forms

- Client Info Update Form (2 pages)
- Individual FEN Declaration Form (4 pages)
- Request for Change of DR (1 page)
- W-8BEN Form (1 page)
- Custom forms can be added on request

Step 1 — Select & Upload

The dealer selects a form template and uploads the pre-filled PDF. The system stores it securely in the cloud.

Step 2 — Position Signatures

Using the visual Setup tool, the dealer draws rectangles on the PDF pages where signatures should appear. No coding or coordinates needed.

Step 3 — Generate Link

The dealer optionally enters a recipient email, then clicks "Generate Link." A unique, expiring link is created.

Step 4 — Client Signs

The client opens the link on any device, draws their signature on the canvas pad, and clicks Submit. One signature covers all positions.

Step 5 — Delivery

The system overlays the signature onto the PDF at all marked positions, emails the signed PDF to the specified recipient, and provides a download.

Getting Started

- Go to the CGSI E-Form URL and enter the shared dealer password
- Select the form template you need from the 4 options
- Fill the PDF form using any PDF editor (Edge, Acrobat, etc.)
- Upload the filled PDF by clicking "Choose PDF File"
- Click "Set Signature Positions" to open the visual setup tool
- On each page, toggle DRAW ON and drag to draw red rectangles where signatures go
- Save positions and go back to the main page
- Enter the recipient email (or leave blank for the default)
- Click "Generate Link" — copy and send it to your client
- The client signs and the signed PDF is automatically emailed

Signature Positioning Tips

- Draw boxes slightly larger than the expected signature area
- The signature image will be automatically scaled to fit each box
- Use multiple boxes for multi-signature forms
- On mobile, toggle DRAW ON only when actively marking positions
- Boxes are saved per template — configure once, reuse forever

The Client Journey

- Client receives the sign link via WeChat, SMS, or Email
- Opens the link on any device (phone, tablet, desktop)
- Sees a preview of the form (form fields if provided)
- Signs once on the signature pad — the same signature is applied to all required positions
- Clicks "Submit Signature"
- The signed PDF is automatically downloaded and emailed
- The entire process takes less than 30 seconds

Security & Privacy

- Each sign link is unique and cannot be guessed
- Links expire automatically after 7 days
- PDFs are stored encrypted in Vercel Blob cloud storage
- Emails are sent via authenticated SMTP
- No client data is permanently stored on the server
- The signing page requires no login or app installation

Single Dealer RM XX / month > 1 dealer access > Unlimited form uploads > Unlimited client signings > Email delivery > Standard support	Team (Up to 5) RM XX / month > 5 dealer seats > Unlimited forms & signings > Priority email delivery > Custom branding > Priority support	Enterprise Custom > Unlimited dealer seats > Custom form templates > API access > Dedicated storage > 24/7 support > SLA guarantee
